

## Riverbed® Training

“One of our Senior Consultants took this training in late September. He is a very experienced individual and has been on numerous training courses during his career.

Upon his return, he was extremely impressed not only with the technology but his ability to interact with your senior technical team members. I have rarely seen an employee of mine return from training so pumped up.”

— VP of a Riverbed Channel Partner

### Make the Most Out of Your Riverbed Deployment!

Riverbed offers training courses designed to cover the administration, deployment, and troubleshooting of Riverbed products from basic to advanced topics. Our training courses lead students through a series of discussions and hands-on exercises (for classroom training) that cover implementation planning, configuration, and testing of Riverbed products in a variety of network environments.

#### Course Benefits

- **Real-World Network Examples** – Courses apply real-world knowledge, drawing on areas of expertise that include network design and integration, security, deployment troubleshooting, network optimization, and network infrastructure
- **Hands-On Lab Exercises** – WAN simulation equipment and application servers mimic environments found in customer networks to provide real-world troubleshooting and administration experience
- **Instruction by Industry Experts** – Courses are designed and presented by Riverbed’s field-experienced Professional Services trainers. Our senior team offers vast, real-world knowledge in deploying networking products in multiple scenarios. In addition to the experience of our delivery team, our material is developed by collaborating with our Technical Support and Engineering teams to ensure that best practices and common issues customers are experiencing in deploying our products are addressed.

#### Course Content

In general, courses are targeted toward those individuals who will be involved in the design, deployment, or administration/operation of Riverbed products. Class sizes are limited to ensure individualized instruction and optimal interaction. Riverbed recommends that all attendees have at least some basic networking knowledge.

#### Regularly-Scheduled and Custom Training

In addition to scheduled courses, Riverbed provides convenient, cost-effective, on-location and/or customized training courses worldwide.

On-site training can either use our mobile classroom or the Riverbed remote lab environment (eLab). Classroom training generally takes place in locations where we have a set of Riverbed appliances, servers, and network emulation equipment, allowing your staff to learn the ins and outs of operating a Riverbed enabled network.
