

# RIVERBED® TRAINING

“One of our Senior Consultants took this training in late September. He is a very experienced individual and has been on numerous training courses during his career.

Upon his return, he was extremely impressed not only with the technology but his ability to interact with your senior technical team members. I have rarely seen an employee of mine return from training so pumped up.”

– VP of a Riverbed Channel Partner

## Make the Most Out of Your Riverbed Steelhead® Deployment

Riverbed offers training courses designed to cover all aspects of Steelhead appliance administration and deployment. Our training courses lead students through a series of discussions and hands-on exercises that cover implementation planning, configuration, and testing of Steelhead appliances in a variety of network environments.

### Course Benefits

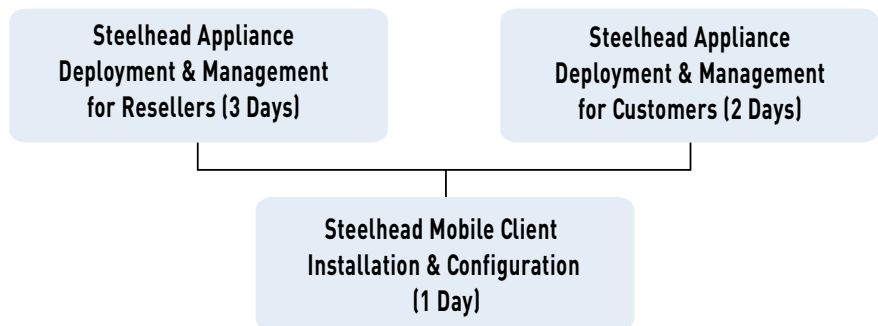

- **Real-World Network Examples** – Courses apply real-world knowledge, drawing on areas of expertise that include network design and integration, security, network deployment troubleshooting, network optimization and network infrastructure management.
- **Hands-On Lab Exercises** – WAN simulation equipment and application servers mimic environments found in customer networks to provide real-world troubleshooting and administration experience.
- **Instruction by Industry Experts** – Courses are designed and presented by Riverbed’s field-experienced Professional Services consultants. Our experienced team offers vast, real-world knowledge in deploying networking products in simple or complicated scenarios. In addition to the experience of our delivery team, our material is developed by collaborating with our technical support team to ensure that best practices and common issues customers are experiencing in deploying our products are addressed.

### Course Content

In general, courses are targeted toward those who will be involved in the design, deployment, or administration of Steelhead appliances. Class sizes are limited to ensure individualized instruction and optimal interaction. As Steelhead deployments involve network resources, we recommend that attendees have a foundation in internetworking knowledge.

### Curriculum Map

Riverbed Training is continually improving our course offerings to coincide with Riverbed’s product offerings.

### Regularly-Scheduled and Custom Training

In addition to scheduled courses, Riverbed provides convenient, cost-effective, on-location and/or customized training courses worldwide.

On-site training will use your deployed Steelhead appliances and focus on integration within your operational environment. Off-site training takes place in our laboratories, where we have a set of Steelhead appliances, servers, and network emulation, allowing your staff to learn the ins and outs of operating a Steelhead-enabled network.
