

Mission: Cloud-first Transformation

Command a cloud-first universe with Riverbed and Zscaler

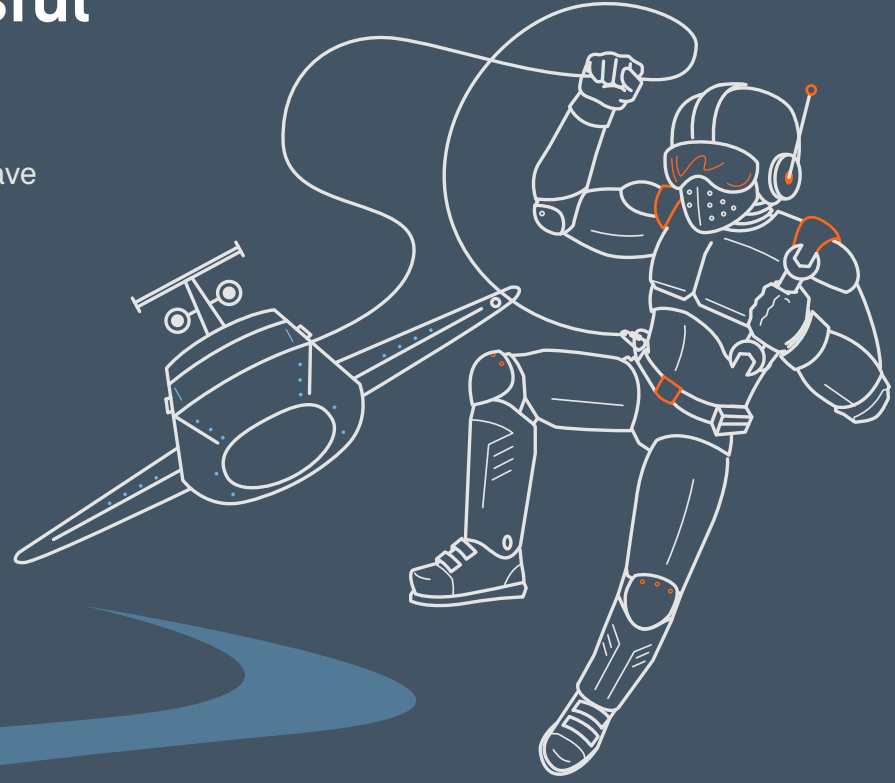

Preparing for a successful cloud deployment

Traditional networking and security approaches have proven to crumble under the pressure of cloud adoption demands:

58% of businesses experience frequent cloud issues due to legacy infrastructure¹

80% of traffic goes out to the Internet, which IT can't fully control²

97% of legacy networks won't keep up with cloud-era demands¹

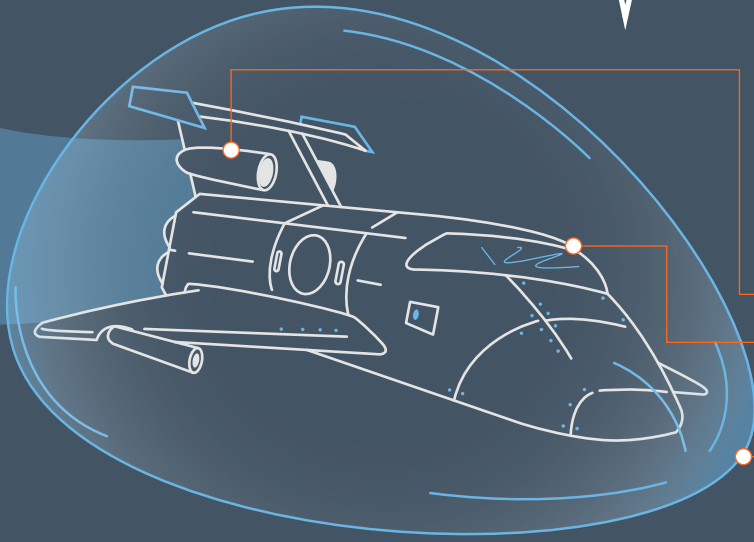

Gearing up for the mission

Zscaler: Shielding your enterprise from threats

Zscaler delivers a comprehensive, cloud-based security platform—blocking the bad and protecting the good.

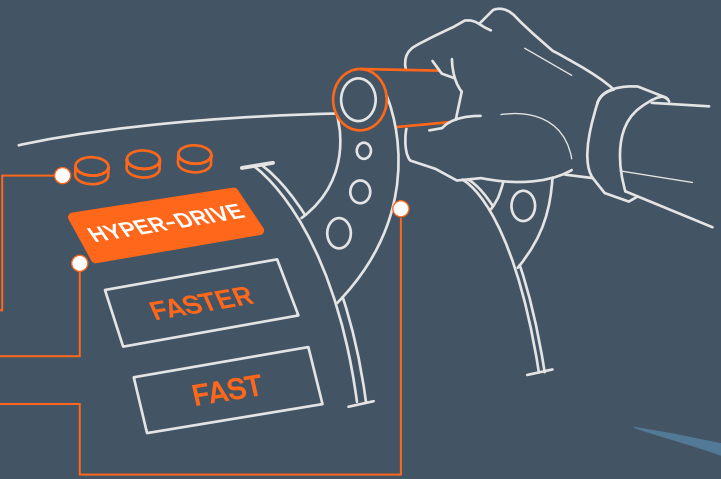

- Cloud scalability and elasticity
- Advanced protection for users wherever they connect
- Threat and access management and data protection

Riverbed SD-WAN: Connecting you to the cloud at hyper speed

Riverbed SD-WAN provides an intelligent, simplified approach to networking. Riverbed's integration with Zscaler empowers you to quickly and securely connect to the cloud.

- Seamless and secure connectivity to Zscaler
- Performance assurance for cloud apps
- Simplified management for the unified network—cloud, WAN, & WLAN

Arriving at cloud-first transformation

Mission accomplished! Zscaler and Riverbed combine to deliver optimal user experience, improved network efficiency, greater business agility, and universal protection for all cloud-destined companies.
