

Network 360

360° Network Visibility and Agentic AI for Faster, more Proactive Network Operations

Today's Network is Harder to See and Manage

Applications now span data centers, public clouds, and SaaS, while employees connect from everywhere. Zero Trust and encrypted VPNs create new visibility blind spots, leaving NetOps teams responsible for troubleshooting services across infrastructure they may not own or control.

As the network becomes more distributed and harder to see, traditional monitoring struggles to keep pace. Tools may collect and present the evidence, but practitioners still spend too much time moving among dashboards, searching for evidence, and manually correlating data to understand what's happening and why.

Stop Connecting the Dots Manually

Network 360 brings deep network evidence and AI together so NetOps teams can diagnose root cause faster, predict emerging issues, and increasingly prevent disruptions before users are affected.

Network 360: One Offering. Complete Network Context. Built-in AI.

Riverbed Network 360 combines the packet intelligence of AppResponse or the flow intelligence of NetProfiler with NPM+ endpoint visibility and the native AI capabilities of Riverbed IQ and Q. The result is a practical path to intelligent network observability within the products and workflows network teams already use.

Purchase either product:

- **AppResponse:** Full-fidelity packet capture and analysis for deep transaction and forensic insight.
- **NetProfiler:** Enterprise-scale flow monitoring and analytics across complex network environments.

For a limited time, either purchase includes the following at no additional charge:

- **NPM+:** Endpoint-based network visibility across remote, cloud, SaaS, and encrypted Zero Trust networks outside your control.
- **Riverbed IQ and Q:** Built-in agentic AI and conversational investigation to accelerate diagnosis and resolution.
- **Professional Services:** Expert assistance with deployment and setup for fast time to value.

Modernize Your Network Operations

Network 360 gives NetOps the visibility and intelligence to work faster today while moving toward more proactive, AI-driven operations. With broader network context and built-in AI, teams can:

- **Troubleshoot faster:** Spend less time navigating tools and manually correlating evidence.
- **Find root cause with confidence:** Correlate packet, flow, and endpoint operational context while preserving access to the underlying evidence.
- **Eliminate modern blind spots:** Extend visibility across remote users, Zero Trust, public cloud, SaaS, and networks outside direct control.
- **Put AI to work:** Bring AI-powered investigation and guide or automated remediations directly into NetOps workflows.
- **Predict and prevent disruption:** Identify emerging issues earlier and increasingly resolve them before users are affected.

See More. Know More. Prevent More.

For a limited time, purchase AppResponse or NetProfiler and get NPM+, Riverbed IQ and Q, and professional services at no additional charge.

Talk to your account manager for more details.

About Riverbed

Riverbed, the leader in AIOps for observability, helps organizations optimize their user's experiences by leveraging AI automation for the prevention, identification, and resolution of IT issues. With over 20 years of experience in data collection and AI and machine learning, Riverbed's open and AI-powered observability platform and solutions optimize digital experiences and greatly improves IT efficiency. Riverbed also offers industry-leading Acceleration solutions that provide fast, agile, secure acceleration of any app, over any network, to users anywhere. Together with our thousands of market-leading customers globally – including 95% of the FORTUNE 100 – we are empowering next-generation digital experiences.
