

Riverbed NetIM

Infrastructure management, monitoring and troubleshooting

The Business Challenge

Maintaining a high-performing and secure network across today's complex hybrid infrastructure requires holistic visibility. Over 58% of enterprises report blind spots in their digital delivery chain is a significant challenge¹. Infrastructure teams often have difficulty managing proactively while performance blind spots make troubleshooting problems difficult and time consuming across their multi-cloud hybrid infrastructure.

Unfortunately, disruptive technology is only increasing this pressure. DevOps causes servers to quickly be added and retired, cloud adoption causes new network challenges, and IoT places increased burden on network bandwidth and performance. Without a new, holistic approach to ITIM, companies will fall behind, failing to deliver the initiatives and services that drive the business.

The Riverbed Solution

Riverbed® NetIM is a holistic solution for discovering, modeling, monitoring and troubleshooting your infrastructure. It enables companies to capture infrastructure topology, detect performance and configuration issues, map application network paths, diagram your network, and troubleshoot infrastructure problems. NetIM is built on a modern containerized architecture to provide expansive horizontal scalability, ultra high performance and cloud deployment for operational agility. As an integrated component of the Riverbed NPM platform, customers are able to manage infrastructure issues in the context of overall, blended performance management.

- **Comprehensive Visibility:** As a part of the Riverbed Unified NPM, NetIM adds critical infrastructure data and analysis. This complements other performance domains (application performance, network performance, UC, and end-user experience management), and provides context to infrastructure management. It enables companies to holistically manage performance and rapidly troubleshoot problems.
- **Real-Time Monitoring:** Riverbed NetIM leverages multiple approaches (e.g., synthetic testing, SNMP, CLI, and IP SLA Metrics, Syslog, Traps) to continually discover and identify new and changed infrastructure components.
- **Automated Analytics:** Powerful analysis enables you to establish performance baselines, measure current performance, and identify anomalies and violations. Configuration information is also captured and similar analytics are applied to detect and identify configuration changes, which may impact the infrastructure.
- **Rich Visualization:** Riverbed NetIM provides a rich set of tailored information from real-time topology with information overlays and dashboards for level 1 operations, to advanced reporting for heads of IT operations.
- **Troubleshoot Performance:** Search-based workflows, event management, and on-demand network paths enable companies to quickly identify and troubleshoot infrastructure performance issues. In addition, Portal-based blended views enable organizations to analyze infrastructure issues in the context of applications, network, and end-user performance.

Modern Application Architecture

NetIM is designed to meet the scale and performance demands of the largest of the large enterprises. Designed from ground up with webscale technologies such as containerized micro services, Kafka messaging framework, Cassandra big-data database and multi-tenancy, IT teams can expect:

- High degree of horizontal scale
- Microservices for superior fault tolerance
- Ultimate operational agility with cloud deployment
- Highest data security with multi-tenancy

Key Benefits

Riverbed NetIM dramatically reduces the workload associated with managing and monitoring your infrastructure. It maximizes network availability by reducing performance blind spots, empowering proactive infrastructure management, and improving troubleshooting.

Increasing IT infrastructure visibility and understanding

- Discover and map infrastructure devices
- Identify changed devices
- Leverage real time network topology views to monitor infrastructure performance

Alerting and anomaly detection

- Alert filtering and site suppression
- Automatically set performance baselines
- Identify performance deviations
- Streamline hand-off between infrastructure and network teams

Troubleshoot infrastructure issues with actionable intelligence

- Drill-down from high-level blended performance views to application specific topology maps
- Quickly identify infrastructure elements that are underperforming or misconfigured
- Understand application path as it travels throughout the network

Get started rapidly and easily

- Horizontal Scale: Highly distributed with horizontal scale architecture to meet enterprise needs for large and complex infrastructures
- Cloud Deployment: Available as virtual or cloud deployments
 - ESXi 6.5 and 6.7 OVA
 - AWS, AWS GovCloud, and AWS C2S
 - Azure and Azure Government

Riverbed Unified Network Performance Management

Riverbed NPM solution makes it easy to monitor, troubleshoot, and analyze what's happening across your hybrid network from users to the data center to the cloud. With end-to-end visibility and actionable insights, you can quickly and proactively resolve performance issues, fortify security, and ensure your cloud workloads and SaaS applications meet your SLAs.

Riverbed's unified network performance management solution gathers all packets, all flows, all device metrics—all the time. It does this across all environments—on-premises, virtual, and cloud—to enable business-centric views across all your domains. Whether you are rolling out new applications, consolidating or virtualizing data centers or migrating to the cloud, Riverbed unified NPM provides service centric insights into existing infrastructure and applications to enhance work from anywhere users' experience.

Related Products

Riverbed NetAuditor

Automates network mapping, documentation, auditing, security, and policy compliance. Riverbed® NetAuditor is a comprehensive solution that helps companies diagram, manage, and report enterprise configuration. The solution's context-specific network maps and diagrams enables users to troubleshoot network and configuration issues, automate audit reporting, and better execute network changes.

Riverbed NetPlanner

Automates analysis and planning of multi-technology, multi-vendor networks. It performs "what if" analyses to manage risk and cost associated with network growth and change—accelerating application deployments and migration to new technologies, such as VoIP, VPNs, IPv6, and more. Riverbed® NetPlanner's predictive design environment trends traffic growth for capacity planning, optimizes network designs to reduce the risk of downtime, and proposes QoS configurations to achieve desired network and application performance.

Riverbed NetProfiler

Provides troubleshooting and root cause of network and application issues with end-to-end network performance monitoring. The solution combines data from Riverbed® Flow Gateway, SteelHead, and AppResponse appliances, as well as virtual solutions into a single, integrated view.

About Riverbed

Riverbed enables organizations to maximize performance and visibility for networks and applications, so they can overcome complexity and fully capitalize on their digital and cloud investments. The Riverbed Network and Application Performance Platform enables organizations to visualize, optimize, remediate and accelerate the performance of any network for any application, and helps to identify and mitigate cybersecurity threats. The platform addresses performance and visibility holistically with best-in-class WAN optimization, unified network performance management (NPM), application acceleration (including Microsoft 365, SaaS, client and cloud acceleration), and enterprise-grade SD-WAN. Riverbed's 30,000+ customers include 99% of the *Fortune* 100. Learn more at riverbed.com.
